

Phishing Email Analysis Report

Date: June 01, 2025

Analyzed by: shaikh Saima Nizam

Subject Analyzed:

"Product for FREE & Featured by Garnier?!"

Findings:

1. Sender Email Address:

- Appears to come from info@mail.smytten.com, which passed SPF and DMARC validation.

2. DKIM Analysis:

- Public key is valid.
- Syntax is valid.
- ❌ Body hash did not verify → Suggests message content may have been tampered with.

3. Language and Tone:

- The subject uses clickbait and emotional manipulation ("FREE" / "Featured" / emoji).
- These are common phishing tactics to trigger user clicks.

4. Email Headers:

- No obvious spoofing.
- But the DKIM signature failure is concerning and can indicate content manipulation.

Conclusion:

While technically authenticated by SPF and DMARC, the DKIM body hash failure is a red flag. Combined with the suspicious subject line, this message may be phishing or at least deceptive marketing.
